SUPPLYING TOP QUALITY READYMIX CONCRETE SINCE 1979.

# Keohane Readymix Ltd.

**Keohane Readymix Ltd is one of Cork's leading independent producers of quality readymix concrete.**

Over the past 3 decades, we have built up a reputation for superior quality, excellent customer service and technical expertise.

Our readymix concrete has been used to build schools, marines, bridges, office developments, public buildings and houses.

We have 3 computerised batching plants (all updated to EN206 standards), a fleet of 33 readymix trucks including 7 conveyor trucks. All our aggregates are produced in house to ensure top quality at all times. We have a capacity to produce 1500 cu m3 of concrete per day and can handle all types of pours.

Please call our office on **023 8838710** or **021 4775599** for all your technical need

## Products

Please see leaflet attached with our full product list

### Readymix Concrete

We produce a range of mixes in strengths from 10N - 60N using 10mm or 20mm aggregate size to meet the different demands required by our customers. Our technical staff can design a special mix to meet any requirement.

Our readymix concrete is manufactured to the requirements of IS EN 206 - 1. All testing is carried out in accordance with IS EN12350 & IS EN12390.

You the customer can be assured of top quality concrete at all times. We also do 50 55 60N concrete.

Please see our website: **[www.keohanereadymix.com](http://www.keohanereadymix.com)** for further details.

## Specialised Concrete Products

### Self Levelling / Self Compacting Concrete

This type of concrete is used in situations where the concrete needs to be placed around congested reinforcement or for intricate form-works where it's impossible to vibrate & compact the concrete fully. It is ideal for underfloor heating and all flooring types. Please see our website: **[www.keohanereadymix.com](http://www.keohanereadymix.com)** for further details.

### Low Carbon Concrete

This type of concrete dramatically reduces your carbon footprint, plus it offers increased strength, reduced permeability, is more chemically stable, has lower heat of hydration, a superior finish and a lighter colour.

We have been using low carbon concrete in all our mixes for some time and can work with you to design a mix to meet your requirements. Please check out **[www.lowcarbonconcrete.ie](http://www.lowcarbonconcrete.ie)** for more information.

### Fibre Reinforced Concrete: Poly Fibres and Steel Fibres

This product is used to eliminate the necessity for placing reinforcing mesh in the concrete screed, and/or to eliminate the need for a second layer of mesh in concrete slabs.

### Plasticised Concrete

This product allows for reduced water requirements for a mix along with reduced segregation during placement.

### SuperPlasticised Concrete

Superplasticiser is introduced to the mix at the batching plant to give the mix greater stability and cohesion. The finished product has an even finish, is more consistent and has greater durability.

### Mass-Concrete Insulated Walls

Unique to Keohane Readymix - a more robust alternative to the standard block insulated wall used in poultry houses and piggeries.

Please call us on **023 8838710** or **021 4775599** for all your concreting needs

The new County Library Building, Cork. Keohane Readymix supplied 8000 m3 of readymix concrete to this project.
